## AI Company OS Blueprint

Use this blueprint to build a full-stack SaaS AI Agent system where specialized AI departments work together under a CEO agent to automate your business.

[Click here to open Emergent App & build yours](#)

---

Build a full-stack SaaS web application called AI Company OS.

The idea is that a single founder can manage an entire business with a team of AI employees.

The system should support multiple AI departments that collaborate with each other, break down goals into tasks, perform research, generate outputs, and ask for approval before executing important actions.

This should be a production-quality application with both frontend and backend.

---

## CORE CONCEPT

The user acts as the Owner.

The Owner gives a high-level objective.

### Example:

- Grow my business
- Find new clients
- Build a marketing strategy
- Launch a SaaS
- Generate content
- Research competitors

A CEO AI receives the goal.

The CEO AI breaks the goal into subtasks and delegates them to specialized AI employees.  
Each AI employee works independently and sends updates back to the CEO.  
The CEO combines the results and presents them to the Owner.  
Sensitive actions require approval.

---

## AI EMPLOYEES

### Create these default agents:

CEO AI

#### Responsibilities:

- Understand business goals
  - Break work into tasks
  - Delegate tasks
  - Monitor all departments
  - Review outputs
  - Coordinate execution
- 

Marketing AI

#### Responsibilities:

- Analyze social media
- Generate content ideas
- Create scripts
- Write blog posts
- Create marketing plans
- Study competitors

#### Outputs:

- Reports
  - Calendars
  - Scripts
  - Campaign plans
- 

Sales AI

**Responsibilities:**

- Research prospects
- Build lead lists
- Score leads
- Generate outreach drafts
- Prepare follow-up sequences

The system should generate email drafts but require user approval before any message is sent.

---

## Research AI

**Responsibilities:**

- Market research
  - Competitor analysis
  - Industry trends
  - Product ideas
  - Opportunity reports
- 

## Developer AI

**Responsibilities:**

- Build software plans
  - Generate code
  - Create APIs
  - Create documentation
  - Build internal tools
- 

## Operations AI

**Responsibilities:**

- Track projects
  - Manage workflows
  - Monitor deadlines
  - Organize tasks
- 

## Finance AI

### Responsibilities:

- Budget planning
  - Revenue forecasting
  - Expense tracking
  - ROI calculations
- 

### HR AI

### Responsibilities:

- Create SOPs
  - Organize team structure
  - Maintain knowledge base
  - Recommend new AI agents
- 

## FRONTEND

Create a premium SaaS dashboard.

### Style:

- Dark mode
  - Glassmorphism
  - Modern typography
  - Animated dashboards
  - Responsive
  - Beautiful charts
  - Real-time updates
- 

## DASHBOARD

### Show:

Total AI Employees

Active Tasks

Completed Tasks

Goals Running

Reports Generated  
Leads Researched  
Content Created  
Projects Running  
System Status

---

## AGENT CARDS

**Every AI employee should have:**

Avatar  
Role  
Current status  
Current task  
Completed tasks  
Performance score  
Recent activity  
View workspace button

---

## CEO PAGE

User enters a business objective.

**Example:**

"Help me grow my AI business."

**CEO AI should:**

Analyze objective  
Break into departments  
Generate execution plan  
Assign tasks  
Display workflow graph  
Monitor progress  
Collect reports  
Return final summary

---

## TASK SYSTEM

### Create:

Task database  
Task priority  
Dependencies  
Status tracking  
Assignments  
Progress bars  
Task history

### Statuses:

Pending  
Planning  
Running  
Waiting Approval  
Completed  
Cancelled

---

## APPROVAL SYSTEM

High-impact actions should require approval.

### Examples:

Send emails  
Publish content  
Delete data  
Deploy projects  
Modify settings

### Show:

Approve  
Reject  
Edit  
Reschedule

---

## MARKETING WORKSPACE

### **Include:**

Content planner  
Script generator  
Trend analysis  
Competitor dashboard  
Campaign planner  
Idea vault  
Analytics dashboard  
Calendar  
Store generated outputs.

---

## SALES WORKSPACE

### **Include:**

Lead database  
Lead scoring  
Company profiles  
Outreach drafts  
Pipeline tracking  
Meeting tracker  
CRM dashboard  
No automatic outreach without approval.

---

## RESEARCH WORKSPACE

### **Include:**

Market reports  
Competitor reports  
Trend tracker  
Industry summaries  
SWOT analysis  
Opportunity database

---

## DEVELOPER WORKSPACE

### **Include:**

Project manager  
Code generator  
API planner  
Architecture diagrams  
Documentation generator  
Deployment tracker

---

## OPERATIONS WORKSPACE

### **Include:**

Kanban board  
Timeline  
Project tracking  
Workflow automation  
Task dependencies  
Execution reports

---

## FINANCE WORKSPACE

### **Include:**

Revenue dashboard  
Expense dashboard  
Forecasts  
Cash flow  
ROI reports  
Business metrics

---

## HR WORKSPACE

---

**Include:**

Knowledge base  
SOP manager  
Training documents  
AI employee library  
Performance reports

---

**LIVE ACTIVITY FEED**

**Display events such as:**

Marketing AI generated report  
Research AI completed analysis  
CEO AI assigned tasks  
Developer AI created documentation  
Sales AI prepared outreach draft  
Finance AI updated forecast  
Operations AI completed workflow  
HR AI updated SOP

---

**DATABASE**

**Create backend models for:**

Users  
Organizations  
AI Employees  
Goals  
Tasks  
Projects  
Reports  
Leads  
Campaigns  
Documents  
Notifications  
Approvals

Settings

Activity Logs

---

## AUTHENTICATION

### Support:

Email login

Google login

Password reset

User profiles

Organization workspaces

Role permissions

---

## API LAYER

Create REST APIs for all resources.

Support future integration with AI models and external services.

---

## AI ORCHESTRATION

### Implement an orchestration layer where:

Owner

->

CEO AI

->

Department AI Employees

->

Outputs

->

CEO Review

->

Approval (if needed)

->

Execution

->

Results

Maintain memory of previous tasks and conversations.

---

## KNOWLEDGE BASE

**Allow users to upload:**

PDFs

Word documents

CSV files

Notes

Website URLs

The AI employees should use this information as business context.

---

## AUTOMATION ENGINE

Allow users to create workflows.

**Example:**

If new lead added

->

Research AI analyzes company

->

Sales AI prepares draft

->

CEO AI reviews

->

User approves

->

Email can be sent

---

## NOTIFICATIONS

### Support:

In-app notifications  
Email notifications  
Task reminders  
Approval requests  
Daily summaries

---

## ADMIN PANEL

### Create admin dashboard for:

Managing users  
Managing AI employees  
System analytics  
Logs  
Billing  
Feature flags

---

## FUTURE READY

### Structure the application so future integrations can be added for:

OpenAI  
Anthropic  
Google Gemini  
Gmail  
Google Calendar  
Slack  
Notion  
HubSpot  
Salesforce  
Zapier  
n8n  
Webhooks

---

## FINAL GOAL

Build a complete AI Operating System where one person can coordinate multiple AI employees through a single dashboard.

The product should feel like having an executive team that researches, plans, organizes, and prepares work continuously, while keeping the human in control of important decisions and external actions.
